AFTERCARE INSTRUCTIONS

Careful aftercare is very important for producing a beautiful and lasting result. Follow these instructions:

- Keep the procedure area clean by washing with lukewarm water and cotton rounds. Do not use a washcloth or sponges. Simply splash with water. Do not use cleansing creams, acne cleansers or astringents.
- Apply the aftercare balm with freshly washed hands or a cotton swab. Use the balm sparingly. Blot off excess with a clean tissue. Do not touch the procedure area without first washing your hands thoroughly.
- Do not scrub, rub or pick at crust that forms. Allow it to flake off by itself. If it is removed before it is ready, the pigment underneath it can be pulled out.
- Do not use any makeup near the procedure area for at least 5 days.
- After the procedure is completely healed, you make go back to your regular cleansing and makeup routine. Avoid scrubbing the area.
- Always use sunscreen after the procedure area is healed to protect from sun fading.

FAILURE TO FOLLOW AFTERCARE INSTRUCTIONS MAY RESULT IN INFECTIONS, PIGMENT LOSS OR DISCOLORATION.

Cautions: If the skin around the eyebrows breaks out in a heat rash or small pimples, this is usually a reaction to the numbing solution and should go away by itself in a couple weeks. Don’t pick. Please call immediately if this occurs so a technician can make note of the reaction and follow up to ensure this is not a more serious situation.

Warnings:

- Do not use any Retin-A or Glycolic Acids in the brow area during or after healing.
- Do not scrub or pick treated areas.
- Do not expose area to the sun or tanning beds.
- Avoid swimming pool for 14 days.
- Do not dye or tweeze eyebrows for at least one week after the procedure.
- Do not use Vaseline, Neosporin or other petroleum based products while healing
- Do not bleach, tint or dye the tattooed area for one month following the procedure.
- No exercising and/or sweating for a few days prior to getting tattooed and for one week after.
What is normal?

- Mild swelling, itching, light scabbing, light bruising and dry tightness. Aftercare ointments work well for scabbing and tightness.
- After 2-7 days any darkness will fade, and once any swelling dissipates unevenness usually disappears. If it is too dark or still a bit uneven after 4 weeks then we can make adjustments during the touch-up appointment.
- Color change or color loss. As the procedure area heals, the color will lighten and sometimes seem to disappear in places. This can be addressed during the touch-up appointment which is why touch-up is necessary. The procedure area has to heal completely before we can address any concerns. Healing takes about four weeks.
- Subsequent touch-ups. A touch-up may be needed 12 to 18 months after the first touch-up procedure depending on your skin, medications, and sun exposure. We recommend the first touch-up 8-12 weeks after the first session, which is included in today’s price. We also recommend touch-ups every 12 to 18 months keep results looking fresh and beautiful. Future touch-up sessions will cost the current touch-up rate at the time the procedure is done. An email photo consultation may be necessary to determine if you need a touch-up or a repeat of the entire procedure.

I have read, understand, and agree to the above instructions.
